

Data Analytics Roadmap (90 Days)

Step 1: Microsoft Excel (Days 1-15)

Learn worksheets, formulas, functions, Pivot Tables, charts, data cleaning, and dashboards.

Goal: Analyze and summarize data efficiently.

Step 2: SQL (Days 16-35)

Learn databases, SELECT, WHERE, GROUP BY, HAVING, JOINS, Subqueries, CTEs, and Window Functions.

Goal: Retrieve, filter, and analyze data from databases.

Step 3: Statistics (Days 36-45)

Learn mean, median, mode, probability, correlation, regression, and hypothesis testing.

Goal: Understand data patterns and make data-driven decisions.

Step 4: Python (Days 46-65)

Learn Python basics, NumPy, Pandas, and Exploratory Data Analysis (EDA).

Goal: Automate data analysis and work with large datasets.

Step 5: Data Visualization (Days 66-75)

Learn Matplotlib, Plotly, and visualization best practices.

Goal: Present insights through clear and impactful charts.

Step 6: Power BI / Tableau (Days 76-85)

Learn data modeling, DAX, interactive dashboards, and reports.

Goal: Build professional business dashboards.

Step 7: Projects (Days 86-90)

Build Sales Analysis, HR Analytics, Customer Churn, and E-commerce Dashboard projects.

Goal: Apply your skills to solve business problems.

Step 8: GitHub Portfolio

Upload projects, SQL queries, notebooks, and dashboards.

Goal: Showcase your work to recruiters.

Step 9: Resume + LinkedIn

Create an ATS-friendly resume and optimize your LinkedIn profile.

Goal: Build a strong professional presence.

Step 10: Interview Preparation

Practice SQL, Excel, Python, Power BI, statistics, and case studies.

Goal: Crack Data Analyst interviews confidently.

Final Destination: Become a Job-Ready Data Analyst with strong technical skills, real-world projects, and a professional portfolio.
